- Highlight your accomplishments, using numbers if possible.

Engineer

IIT Ternopil - PAT "ISKRA" Lviv

📅 09/2009 - 03/2012 📍 Ternopil Region, Lviv, Ukraine

SUMMARY

I am a Frontend Software Engineer with a proven track record of delivering high-performance, scalable applications using modern tools like React, TypeScript, and the TanStack suite. My ability to bridge frontend and backend technologies, such as Node.js and PostgreSQL, enables me to develop end-to-end solutions that drive business success. My technical stack includes a strong command of React, Redux, and the TanStack suite (Query, Router, Table, Forms), alongside proficiency in TypeScript, React Router v6, and monorepo architectures with NX. I bring a developer's mindset to creating seamless user interfaces, while also ensuring the reliability and scalability of backend integrations using Node.js, Express.js, and databases like PostgreSQL and SQLite. My experience with modern build tools like Vite, Vitest, and schema validation with Zod allows me to optimize development workflows, enabling efficient and maintainable codebases. I thrive in Agile environments, where continuous learning and adapting to new technologies are essential. I take pride in creating intuitive, high-performing UIs while maintaining clean, well-tested code. With a focus on delivering consistent, high-quality software solutions, I'm committed to engineering products that provide exceptional user experiences.
